

TOM TOKEN

The Cat Who Never Gave Up:
From Ukraine to the Blockchain

WHITEPAPER v1.2 — September 2026

Token Name	TOM
Symbol	\$TOM
Network	Robinhood Chain
Standard	ERC-20
Contract	0xC439Aa6CFDC5DC5224d8F00f62D6e8ef3417Caec
Initial Supply	1,000,000,000 TOM
Burn	A portion of the supply has been permanently burned, reducing total supply
Website	tom-token.netlify.app

1. The Story of TOM

TOM is a cat from **Ukraine**. Life was not easy for him — he faced hardship, difficult days, and problems that would make most give up.

But TOM **never gave up**.

Instead of surrendering, he picked himself up and walked into a brand-new world: **crypto**. He didn't come just to survive — he came to **build**, to **grow**, and to prove that anyone, no matter where they come from or what they've been through, can make it.

TOM is every underdog. TOM is all of us.

2. What is \$TOM?

TOM (\$TOM) is a **community-driven meme token** on **Robinhood Chain**, inspired by TOM's story. It is a fun, social project: a token for people who believe in second chances, hard work, and community. No complicated promises on day one — just a fair launch, an open community, and a character people love.

3. Vision

To turn TOM from a meme into a **real-world brand**. The flagship dream: **TOM Cafés** — physical coffee shops where \$TOM is accepted as payment, turning holders into customers and customers into holders. Step by step, TOM goes from the blockchain to your neighborhood.

4. Tokenomics

TOM launched with a fixed initial supply of **1,000,000,000 tokens**. A portion has been **permanently burned** — like throwing away half the chocolate so the rest becomes rarer and more valuable. There is **no mint function**: no new tokens can ever be created.

- **Fair launch**: launched via the Pons bonding curve — no presale, no insider allocations.
- **Fixed supply**: the contract is not mintable; supply can only decrease via burns.
- **Burns create scarcity**: fewer tokens in circulation supports long-term value.
- **Verified contract**: publicly verified on the block explorer.

5. Security

- **Contract verified:** source code publicly verified — anyone can audit it.
- **Not mintable:** the team cannot create new tokens.
- **No proxy contract:** the contract logic cannot be secretly changed.

6. Roadmap — Step by Step

We grow in small, honest steps:

PHASE 1 — Community (Now)

- Fair launch on Pons bonding curve
- Build Telegram & X community
- Website + whitepaper live

PHASE 2 — Visibility

- Explorer branding (logo & info)
- Listings: DEXTools, DexScreener
- Listings: CoinGecko, CoinMarketCap
- TOM merchandise (shirts, stickers)

PHASE 3 — Real World

- **TOM Café pilot:** first café accepting \$TOM
- Café profits buy & **burn** \$TOM — supporting the price
- Holder discounts & loyalty rewards
- More locations as we grow

7. How the Café Helps the Token

When a TOM Café earns profit, a share of that profit is used to **buy \$TOM from the market and burn it**. Every burn means fewer tokens exist — and fewer tokens with steady demand means stronger value for holders. The café isn't a side project: it's an **engine that supports the token**.

8. Community

TOM is a **social project first**. The community is everything. Join the journey:

9. Disclaimer

\$TOM is a community meme token. Nothing here is financial advice. Crypto is volatile and risky — always do your own research (DYOR) and never invest more than you can afford to lose. Roadmap items are goals, not guarantees.
